

Permit with introductory note

The Environmental Permitting (England & Wales) Regulations 2010

Runcorn Energy from Waste Facility

INEOS Chlor Limited

Picow Farm Road

Weston Point

Runcorn

Cheshire

WA7

Permit number

EPR/EP3731XL

Runcorn Energy from Waste Facility

Permit Number EPR/EP3731XL

Introductory note

This introductory note does not form a part of the permit

The main features of the facility are as follows. The Energy from Waste (EfW) facility is located to the north of the Runcorn site in an area known as Weston Point. The site includes rail sidings along its eastern boundary running parallel to Picow Farm Road. This provides the site with a rail link to the north bound line at Runcorn Railway Station. The Mersey Estuary at its nearest point is located approximately 200m to the west of the site, beyond Weston Docks. The estuary is a Special Protection Area (SPA), designated for its nature conservation importance for feeding and roosting ducks and waders and is also a Ramsar site and Site of Special Scientific Interest (SSSI).

The EfW facility has a total capacity of approximately 350 MW (thermal input) and is capable of generating up to approximately 86MW of electrical power and 110 tonnes per hour of steam. This provides approximately 20% of the energy requirements at the adjacent Runcorn Halochemicals installation and replaces energy that is currently derived from natural gas.

Waste material burned at the facility is primarily refuse derived fuel (RDF) and digestate produced from the Mechanical and Biological Treatment (MBT) of Municipal Solid Waste (MSW) but it also includes some appropriately treated commercial and industrial (C&I) waste and biomass. All waste material for processing received at the facility is non-hazardous.

The facility consists of four incinerator lines with a total annual throughput of up to 850,000 tonnes per year of waste materials with a design average net calorific value (NCV) of approximately 13MJ/kg. The facility is in two construction phases:

- Phase 1 consists of two lines, provides the common infrastructure for the whole facility and has a capacity of 375,000-425,000 tonnes per year (depending on NCV).
- Phase 2 consists of two further lines which doubles the capacity of the facility.

This permit considers the activities associated with both Phases of the project.

Waste material arrives either by rail or by road and is weighed before proceeding into the tipping hall where it is tipped into the RDF bunker of sufficient capacity to hold several days waste inputs.

Moving grate technology is used for burning the waste material. The furnace design ensures that a temperature of at least 850°C for a period of at least two seconds is achieved in the combustion chamber. To ensure that the temperature does not fall below 850°C, auxiliary burners firing a fuel of natural gas is automatically triggered by online process monitoring equipment.

Selective Non-Catalytic Reduction (SNCR), involving the injection of ammonia solution, provides for the abatement of nitrogen oxides generated within the furnace.

Hot gases from the furnace pass into a boiler. Steam raised in the boiler is passed to turbines to generate electricity or is exported as steam; both energy streams are used within the Runcorn site processes. The ability to export electricity into the National Grid is also included within the design.

Combustion gases are cleaned before they are released to atmosphere. There are two abatement stages in series. Each stage consists of a reactor where dry lime (to neutralise acid gas components) and activated carbon (to absorb heavy metals, dioxins and furans) are injected and a bag filter unit to remove fine particulates. The residues of the bag filters and the reactor are collected and directed to a residues silo.

Cleaned flue gases exiting the abatement system of each of the incinerator lines are discharged through a four-flue, 105m tall, stack.

A single process water discharge from the facility, primarily comprising cooling water purge from the cooling towers and excess rainwater, is released directly into the disused Runcorn & Weston Canal.

All plant areas are surfaced to the appropriate standards for the activities within those areas. All liquid tanks and drums, whose emissions to water or land could cause pollution, are contained in adequate bunding constructed in line with industry best practice standards and sized to contain 110% of the tank contents. Materials used for surfacing of process areas and bunds are resistant to the materials they may come into contact with.

There are no direct discharges to groundwater from the facility.

Odour problems are not expected from the facility. Any potential odours from storage of the waste materials are extracted from above the storage bunker and used as combustion air within the furnace, thereby destroying any potentially odorous compounds.

The main solid residues produced by the EfW facility are bottom ash and air pollution control (APC) residues. Bottom ash is processed by contractor and may be sent for incorporation within aggregates or building blocks. APC residues are hazardous and are treated before being disposed of to landfill.

The status log of the permit sets out the permitting history, including any changes to the permit reference number

End of Introductory Note

Permit

The Environmental Permitting (England and Wales) Regulations 2010

Permit

Permit number

EPR/EP3731XL

The Environment Agency hereby authorises, under regulation 13 of the Environmental Permitting (England and Wales) Regulations 2010

INEOS Chlor Limited (“the operator”),

whose registered office is

Runcorn Site HQ

South Parade

PO Box 9

Runcorn

Cheshire

WA7 4JE

company registration number **4068812**

to operate a facility comprising an installation at

Runcorn Energy from Waste Facility

Picow Farm Road

Weston Point

Runcorn

Cheshire

WA7

to the extent authorised by and subject to the conditions of this permit.

Name	Date
Paul Butler	17 May 2011

Authorised on behalf of the Environment Agency

Conditions

1 Management

1.1 General management

1.1.1 The operator shall manage and operate the activities:

- (a) in accordance with a written management system that identifies and minimises risks of pollution, including those arising from operations, maintenance, accidents, incidents, non-conformances, closure and those drawn to the attention of the operator as a result of complaints; and
- (b) using sufficient competent persons and resources.

1.1.2 Records demonstrating compliance with condition 1.1.1 shall be maintained.

1.1.3 Any person having duties that are or may be affected by the matters set out in this permit shall have convenient access to a copy of it kept at or near the place where those duties are carried out.

1.2 Energy efficiency

1.2.1 The operator shall:

- (a) take appropriate measures to ensure that energy is recovered with a high level of energy efficiency and energy is used efficiently in the activities;
- (b) review and record at least every four years whether there are suitable opportunities to improve the energy efficiency of the activities; and
- (c) take any further appropriate measures identified by a review.

1.3 Efficient use of raw materials

1.3.1 The operator shall:

- (a) take appropriate measures to ensure that raw materials and water are used efficiently in the activities;
- (b) maintain records of raw materials and water used in the activities;
- (c) review and record at least every four years whether there are suitable alternative materials that could reduce environmental impact or opportunities to improve the efficiency of raw material and water use; and
- (d) take any further appropriate measures identified by a review.

1.4 Avoidance, recovery and disposal of wastes produced by the activities

1.4.1 The operator shall take appropriate measures to ensure that –

- (a) the waste hierarchy referred to in Article 4 of the Waste Framework Directive is applied to the generation of waste by the activities; and

- (b) any waste generated by the activities is treated in accordance with the waste hierarchy referred to in Article 4 of the Waste Framework Directive; and
 - (c) where disposal is necessary, this is undertaken in a manner which minimises its impact on the environment;
- 1.4.2 The operator shall review and record at least every four years whether changes to those measures should be made; and
- 1.4.3 The operator shall take any further appropriate measures identified by a review.

2 Operations

2.1 Permitted activities

- 2.1.1 The operator is authorised to carry out the activities specified in schedule 1 table S1.1 (the "activities").
- 2.1.2 Waste authorised by this permit shall be clearly distinguished from any other waste on the site.

2.2 The site

- 2.2.1 The activities shall not extend beyond the site, being the land shown edged in green on the site plan at schedule 7 to this permit.

2.3 Operating techniques

- 2.3.1 (a) The activities shall, subject to the conditions of this permit, be operated using the techniques and in the manner described in the documentation specified in schedule 1, table S1.2, unless otherwise agreed in writing by the Environment Agency.
- (b) If notified by the Environment Agency that the activities are giving rise to pollution, the operator shall submit to the Environment Agency for approval within the period specified, a revision of any plan specified in schedule 1, table S1.2 or otherwise required under this permit, and shall implement the approved revised plan in place of the original from the date of approval, unless otherwise agreed in writing by the Environment Agency.
- 2.3.2 Any raw materials or fuels listed in schedule 2 table S2.1 shall conform to the specifications set out in that table.
- 2.3.3 Waste shall only be accepted if:
- (a) it is of a type and quantity listed in schedule 2 table S2.2; and
 - (b) it conforms to the description in the documentation supplied by the producer or holder;
 - (c) having been separately collected for recycling, it is contaminated and otherwise destined for landfill
- 2.3.4 The operator shall ensure that where waste produced by the activities is sent to a relevant waste operation, that operation is provided with the following information, prior to the receipt of the waste:
- (a) the nature of the process producing the waste;
 - (b) the composition of the waste;
 - (c) the handling requirements of the waste;

- (d) the hazard classification associated with the waste; and
 - (e) the waste code of the waste.
- 2.3.5 The operator shall ensure that where waste produced by the activities is sent to a landfill site, it meets the waste acceptance criteria for that landfill.
- 2.3.6 Waste shall not be charged, or shall cease to be charged, if:
- (a) the combustion chamber temperature is below, or falls below, 850°C; or
 - (b) any continuous emission limit value in schedule 3 table S3.1(a) is exceeded; or
 - (c) any continuous emission limit value in schedule 3 table S3.1 is exceeded, other than under WID abnormal operating conditions; or
 - (d) monitoring results required to demonstrate compliance with any continuous emission limit value in schedule 3 table S3.1 are unavailable other than under WID abnormal operating conditions.
- 2.3.7 The operator shall have at least one auxiliary burner in each line at start up or shut down or whenever the operating temperature falls below that specified in condition 2.3.6, as long as incompletely burned waste is present in the combustion chamber. Unless the temperature specified in condition 2.3.6 is maintained in the combustion chamber, such burner(s) may be fed only with fuels which result in emissions no higher than those arising from the use of gas oil, liquefied gas or natural gas.
- 2.3.8 The operator shall record the beginning and end of each period of "WID abnormal operation".
- 2.3.9 During a period of "WID abnormal operation", the operator shall restore normal operation of the failed equipment or replace the failed equipment as rapidly as possible.
- 2.3.10 Where, during "WID abnormal operation", any of the following situations arise, the operator shall, as soon as is practicable, cease the burning of waste until normal operation can be restored:
- (a) continuous measurement shows that an emission exceeds any emission limit value in Schedule 3 table S3.1 due to disturbances or failures of the abatement systems, or continuous emission monitor(s) are out of service, as the case may be, for a total of 4 hours uninterrupted duration;
 - (b) the cumulative duration of "WID abnormal operation" periods over 1 calendar year exceeds 60 hours on an incineration line;
 - (c) continuous measurement shows that an emission exceeds any emission limit value in Schedule 3 table S3.1(a) due to disturbances or failures of the abatement systems;
 - (d) the alternative techniques to demonstrate compliance with the "WID abnormal operation" emission limit value(s) for particulates, TOC and / or CO in Schedule 3 table S3.1(a), as detailed in the application or as agreed in writing with the Environment Agency, are unavailable.
- 2.3.11 The operator shall interpret the end of the period of "WID abnormal operation" as the earliest of the following:
- (a) when the failed equipment is repaired and brought back into normal operation;
 - (b) when the operator initiates a shut down of the waste combustion activity, as described in the application or as agreed in writing with the Environment Agency;
 - (c) when a period of four hours has elapsed from the start of the "WID abnormal operation";

- (d) when, in any calendar year, an aggregated period of 60 hours "WID abnormal operation" has been reached for a given incineration line.

2.3.12 Bottom ash and APC residues shall not be mixed.

2.4 Improvement programme

2.4.1 The operator shall complete the improvements specified in schedule 1 table S1.3 by the date specified in that table unless otherwise agreed in writing by the Environment Agency.

2.4.2 Except in the case of an improvement which consists only of a submission to the Environment Agency, the operator shall notify the Environment Agency within 14 days of completion of each improvement.

2.5 Pre-operational conditions

2.5.1 The activities shall not be brought into operation until the measures specified in schedule 1 table S1.4 have been completed.

3 Emissions and monitoring

3.1 Emissions to water, air or land

3.1.1 There shall be no point source emissions to water, air or land except from the sources and emission points listed in schedule 3 tables S3.1 and S3.2 except in "WID abnormal operation", when there shall be no point source emissions to water, air or land except from the sources and emission points listed in schedule 3 tables S3.1(a) and S3.2.

3.1.2 The limits given in schedule 3 shall not be exceeded.

3.1.3 In respect of schedule 3 table S3.2, a measured value in the zone between the emission target and emission limit shall not on any one occasion remain within that zone for a period longer than 2 hours and cumulatively for no longer than 4 hours in any month.

3.1.4 Wastes produced at the site shall, as a minimum, be sampled and analysed in accordance with schedule 3 table S3.5. Additional samples shall be taken and tested and appropriate action taken, whenever:

- (a) disposal or recovery routes change; or
- (b) it is suspected that the nature or composition of the waste has changed such that the route currently selected may no longer be appropriate.

3.2 Fugitive emissions of substances

3.2.1 Emissions of substances not controlled by emission limits (excluding odour) shall not cause pollution. The operator shall not be taken to have breached this condition if appropriate measures, including, but not limited to, those specified in any approved emissions management plan, have been taken to prevent or where that is not practicable, to minimise, those emissions.

3.2.2 All liquids in containers, whose emission to water or land could cause pollution, shall be provided with secondary containment, unless the operator has used other appropriate measures to prevent or where that is not practicable, to minimise, leakage and spillage from the primary container.

3.3 Odour

3.3.1 Emissions from the activities shall be free from odour at levels likely to cause pollution outside the site, as perceived by an authorised officer of the Environment Agency, unless the operator has used appropriate measures, including, but not limited to, those specified in any approved odour management plan, to prevent or where that is not practicable to minimise the odour.

3.3.2 The operator shall:

- (a) if notified by the Environment Agency that the activities are giving rise to pollution outside the site due to odour, submit to the Environment Agency for approval within the period specified, an odour management plan;
- (b) implement the approved odour management plan, from the date of approval, unless otherwise agreed in writing by the Environment Agency.

3.4 Noise and vibration

3.4.1 Emissions from the activities shall be free from noise and vibration at levels likely to cause pollution outside the site, as perceived by an authorised officer of the Environment Agency, unless the operator has used appropriate measures, including, but not limited to, those specified in any approved noise and vibration management plan to prevent or where that is not practicable to minimise the noise and vibration.

3.4.2 The operator shall:

- (a) if notified by the Environment Agency that the activities are giving rise to pollution outside the site due to noise and vibration, submit to the Environment Agency for approval within the period specified, a noise and vibration management plan;
- (b) implement the approved noise and vibration management plan, from the date of approval, unless otherwise agreed in writing by the Environment Agency.

3.5 Monitoring

3.5.1 The operator shall, unless otherwise agreed in writing by the Environment Agency, undertake the monitoring specified in the following tables in schedule 3 to this permit:

- (a) point source emissions specified in tables S3.1, S3.1(a) and S3.2;
- (b) noise specified in table S3.3;
- (c) process monitoring specified in table S3.4;
- (d) residue quality specified in table S3.5

3.5.2 The operator shall maintain records of all monitoring required by this permit including records of the taking and analysis of samples, instrument measurements (periodic and continual), calibrations, examinations, tests and surveys and any assessment or evaluation made on the basis of such data.

3.5.3 Monitoring equipment, techniques, personnel and organisations employed for the emissions monitoring programme and the environmental or other monitoring specified in condition 3.5.1 shall have either MCERTS certification or MCERTS accreditation (as appropriate) unless otherwise agreed in writing by the Environment Agency. Newly installed CEMs, or CEMs replacing existing CEMs, shall have MCERTS certification and have an MCERTS certified range which is not greater than 1.5 times the daily emission limit value (ELV) specified in table S3.1 in schedule 3. The CEM shall also be able to measure instantaneous values over the ranges which are to be expected during all operating conditions. If it is necessary to use more than one range setting of the CEM to achieve this requirement, the CEM shall be verified for monitoring supplementary, higher ranges.

- 3.5.4 Permanent means of access shall be provided to enable sampling/monitoring to be carried out in relation to the emission points specified in schedule 3 tables S3.1 and S3.2 unless otherwise agreed in writing by the Environment Agency.
- 3.5.5 Where Continuous Emission Monitors are installed to comply with the monitoring requirements in schedule 3 table S3.1 and S3.1(a); the Continuous Emission Monitors shall be used such that;
- (a) the values of the 95% confidence intervals of a single measured result at the daily emission limit value shall not exceed the following percentages:
- | | |
|---|-----|
| • Carbon monoxide | 10% |
| • Sulphur dioxide | 20% |
| • Oxides of nitrogen (NO & NO ₂ expressed as NO ₂) | 20% |
| • Particulate matter | 30% |
| • Total organic carbon (TOC) | 30% |
| • Hydrogen chloride | 40% |
- (b) valid half-hourly average values shall be determined within the effective operating time (excluding the start-up and shut-down periods) from the measured values after having subtracted the value of the confidence intervals in condition 3.5.5;
- (c) where it is necessary to calibrate or maintain the monitor and this means that data are not available for a complete half-hour period, the half-hourly average shall in any case be considered valid if measurements are available for a minimum of 20 minutes during the half-hour period. The number of half-hourly averages so validated shall not exceed 5 per day;
- (d) daily average values shall be determined as the average of all the valid half-hourly average values within a calendar day. The daily average value shall be considered valid if no more than five half-hourly average values in any day have been determined not to be valid;
- (e) no more than ten daily average values per year shall be determined not to be valid.

4 Information

4.1 Records

- 4.1.1 All records required to be made by this permit shall:
- (a) be legible;
- (b) be made as soon as reasonably practicable;
- (c) if amended, be amended in such a way that the original and any subsequent amendments remain legible, or are capable of retrieval; and
- (d) be retained, unless otherwise agreed in writing by the Environment Agency, for at least 6 years from the date when the records were made, or in the case of the following records until permit surrender:
- off-site environmental effects; and
 - matters which affect the condition of the land and groundwater.

- 4.1.2 The operator shall keep on site all records, plans and the management system required to be maintained by this permit, unless otherwise agreed in writing by the Environment Agency.

4.2 Reporting

- 4.2.1 The operator shall send all reports and notifications required by the permit to the Environment Agency using the contact details supplied in writing by the Environment Agency.
- 4.2.2 A report or reports on the performance of the activities over the previous year shall be submitted to the Environment Agency by 31 January (or other date agreed in writing by the Environment Agency) each year. The report(s) shall include as a minimum:
- (a) a review of the results of the monitoring and assessment carried out in accordance with the permit including an interpretive review of that data;
 - (b) the annual production /treatment data set out in schedule 4 table S4.2; and
 - (c) the performance parameters set out in schedule 4 table S4.3 using the forms specified in table S4.4 of that schedule.
 - (d) the functioning and monitoring of the incineration plant in a format agreed with the Environment Agency. The report shall, as a minimum requirement (as required by Article 12(2) of the Waste Incineration Directive) give an account of the running of the process and the emissions into air and water compared with the emission standards in the WID.
- 4.2.3 Within 28 days of the end of the reporting period the operator shall, unless otherwise agreed in writing by the Environment Agency, submit reports of the monitoring and assessment carried out in accordance with the conditions of this permit, as follows:
- (a) in respect of the parameters and emission points specified in schedule 4 table S4.1;
 - (b) for the reporting periods specified in schedule 4 table S4.1 and using the forms specified in schedule 4 table S4.4 ; and
 - (c) giving the information from such results and assessments as may be required by the forms specified in those tables.
- 4.2.4 The operator shall, unless notice under this condition has been served within the preceding four years, submit to the Environment Agency, within six months of receipt of a written notice, a report assessing whether there are other appropriate measures that could be taken to prevent, or where that is not practicable, to minimise pollution.
- 4.2.5 Within 1 month of the end of each quarter, the operator shall submit to the Environment Agency using the form made available for the purpose, the information specified on the form relating to the site and the waste accepted and removed from it during the previous quarter.

4.3 Notifications

- 4.3.1 The Environment Agency shall be notified without delay following the detection of:
- (a) any malfunction, breakdown or failure of equipment or techniques, accident, or emission of a substance not controlled by an emission limit which has caused, is causing or may cause significant pollution;
 - (b) the breach of a limit specified in the permit; or
 - (c) any significant adverse environmental effects.
- 4.3.2 Any information provided under condition 4.3.1 shall be confirmed by sending the information listed in schedule 5 to this permit within the time period specified in that schedule.

4.3.3 Where the Environment Agency has requested in writing that it shall be notified when the operator is to undertake monitoring and/or spot sampling, the operator shall inform the Environment Agency when the relevant monitoring and/or spot sampling is to take place. The operator shall provide this information to the Environment Agency at least 14 days before the date the monitoring is to be undertaken.

4.3.4 The Environment Agency shall be notified within 14 days of the occurrence of the following matters, except where such disclosure is prohibited by Stock Exchange rules:

Where the operator is a registered company:

- (a) any change in the operator's trading name, registered name or registered office address; and
- (b) any steps taken with a view to the operator going into administration, entering into a company voluntary arrangement or being wound up.

Where the operator is a corporate body other than a registered company:

- (a) any change in the operator's name or address; and
- (b) any steps taken with a view to the dissolution of the operator.

4.3.5 Where the operator proposes to make a change in the nature or functioning, or an extension of the activities, which may have consequences for the environment and the change is not otherwise the subject of an application for approval under the Regulations or this permit:

- (a) the Environment Agency shall be notified at least 14 days before making the change; and
- (b) the notification shall contain a description of the proposed change in operation.

4.3.6 The Environment Agency shall be given at least 14 days notice before implementation of any part of the site closure plan.

4.4 Interpretation

4.4.1 In this permit the expressions listed in schedule 6 shall have the meaning given in that schedule.

4.4.2 In this permit references to reports and notifications mean written reports and notifications, except where reference is made to notification being made "without delay", in which case it may be provided by telephone.

Schedule 1 – Operations

Table S1.1 activities

Activity listed in Schedule 1 of the EP Regulations	Description of specified activity	Limits of specified activity
S5.1 A(1)(c)	The incineration of non-hazardous waste in an incineration plant with a capacity of 1 tonne or more per hour.	The incineration of non-hazardous waste including the operation of incineration lines, boilers and auxiliary burners; facilities for the treatment of exhaust gases; on-site facilities for treatment, storage and disposal of residues, surface water and waste water; systems for controlling and monitoring incineration operations; and receipt, storage and handling of wastes and raw materials (including fuels).
Directly Associated Activity		
Steam and electrical power supply.	The generation of electricity using a steam turbine	The electricity is used on-site and exported to the Runcorn Halochemicals installation and the grid. Steam is exported to the Runcorn Halochemicals installation.

Table S1.2 Operating techniques

Description	Parts	Date Received
Application	The operating techniques in Sections 1 (Introduction), 2 (Techniques for pollution control), 3 (Emissions), 4 (Impact) and 5 (BAT Assessment) of the application document.	21/10/09
Response to Schedule 5 Notice #4 dated 17/05/10	Response to questions concerning ash handling,	11/06/10
Response to Schedule 5 Notice #5 dated 06/08/10	Response to questions regarding CEM arrangements to cope with abnormal operation and bag breakage detectors	13/08/10
Response to emailed request for information dated 17/01/11	Response to questions about floodwater handling	26/01/11

Table S1.3 Improvement programme requirements

Reference	Requirement	Date
IC1	<p>The operator shall submit a written proposal to the Environment Agency to carry out tests to determine the size distribution of the particulate matter in the exhaust gas emissions to air from emission points A1, A2, A3 and A4 identifying the fractions within the PM₁₀, PM_{2.5} and PM_{1.0} ranges. The proposal shall include a timetable for approval by the Environment Agency to carry out such tests and produce a report on the results.</p> <p>On receipt of written agreement by the Environment Agency to the proposal and the timetable, the operator shall carry out the tests and submit to the Environment Agency a report on the results.</p>	Proposal to be submitted to the Environment Agency within 6 months of completion of commissioning of each construction phase.

Table S1.3 Improvement programme requirements

Reference	Requirement	Date
IC2	The operator shall submit a written summary report to the Environment Agency to confirm by the results of calibration and verification testing whether the performance of Continuous Emission Monitors for parameters as specified in Table S3.1 and Table S3.1(a) complies with the requirements of BS EN 14181, specifically the requirements of QAL1, QAL2 and QAL3.	Initial calibration report to be submitted to the Environment Agency within 3 months of completion of commissioning of each construction phase. Full summary evidence compliance report to be submitted within 18 months of commissioning of each construction phase.
IC3	The operator shall carry out checks to verify the residence time, minimum temperature and oxygen content of the exhaust gases in each furnace whilst operating under the anticipated most unfavourable operating conditions. The results shall be submitted in writing to the Environment Agency.	Within 3 months of completion of commissioning of each construction phase.
IC4	The operator shall submit a written report to the Environment Agency which shall include: <ul style="list-style-type: none"> - a review of performance of the facility against the conditions of this permit. - details of optimisation of acid gas, dioxin and mercury emission abatement systems including reagent dosing rates. - details of optimisation of the NO_x emission abatement system; how the Selective Non Catalytic Reduction (SNCR) system and combustion settings are controlled to optimise NO_x and N₂O emissions whilst also maintaining optimum NH₃ emissions. - details of procedures developed during commissioning for achieving and demonstrating satisfactory process control and covering the range of designed operating rates. 	Within 4 months of completion of commissioning of each construction phase.
IC5	The Operator shall carry out an assessment of the impact of emissions to air of Arsenic, Nickel and Chromium (VI) having regard to the 2009 report of the Expert Panel on Air Quality Standards – Guidelines for Metal and Metalloids in Ambient Air for the Protection of Human Health. The assessment shall predict the impact of Arsenic, Nickel and Chromium (VI) against the guidelines through the use of emissions monitoring data during the first year of operation of each construction phase and air dispersion modelling. A report on the assessment shall be made to the Environment Agency.	Within 15 months of completion of commissioning of each construction phase.
IC6	The Operator shall submit a written report to the Agency on the implementation of its Environmental Management System and the progress made in the accreditation of the system by an external body or if appropriate submit a schedule by which the EMS will be subject to accreditation.	31/12/11 and annually until EMS attained.

Table S1.4 Pre-operational measures

Reference	Requirement	Date
PO01	The operator shall submit a written report to the Environment Agency of the details of the computational fluid dynamic (CFD) modelling. The report shall demonstrate whether the design combustion conditions comply with the residence time and temperature requirements as defined by the Waste Incineration Directive.	After completion of furnace design and at least three calendar months before any furnace operation.
PO02	The operator shall submit a written report to the Environment Agency specifying arrangements for continuous and periodic monitoring of emissions to air to comply with all relevant guidance, including Technical Guidance Notes M1 and M2, and the SGN. The report shall include the following: <ul style="list-style-type: none"> • plant and equipment details, including accreditation to MCERTS • methods and standards for sampling and analysis of all substances controlled by the Waste Incineration Directive plus monitoring of N₂O and NH₃ • monitoring locations, access and working platforms 	At least three calendar months before waste is burned in any furnace.
PO03	Prior to the commencement of commissioning the Operator shall provide a written commissioning plan for approval by the Agency. The plan shall include: <ul style="list-style-type: none"> • the expected emissions to the environment during the different stages of commissioning, • the expected durations of commissioning activities and estimated timeline for completion • the actions to be taken to protect the environment and report to the Agency in the event that actual emissions exceed expected emissions. Commissioning shall be carried out in accordance with the commissioning plan as approved.	At least three calendar months before any furnace operation.
PO04	The operator shall submit a written plan to the Environment Agency for approval detailing the ash sampling protocol to be used for APC residues and bottom ash, in conformance to Environment Agency Guidance. The plan shall be implemented in accordance with the Environment Agency's written approval	At least three calendar months before burning any waste.
PO05	The operator shall submit a written site closure plan to the Environment Agency for approval in accordance with the requirements set out in Environment Agency Guidance.	At least three calendar months before the start of commissioning.
PO06	The operator shall provide the Environment Agency with a written report for approval describing the detailed programme of noise and vibration monitoring that will be carried out at the site at the commissioning stage and also when the plant is fully operational (after phase 1 and after phase 2 of the development) as proposed in the Application. The report shall include confirmation of locations, time, frequency and methods of monitoring. The monitoring programme shall be carried out in accordance with the Environment Agency's written approval.	At least three calendar months before the start of commissioning of each phase of construction
PO07	The operator shall notify the Environment Agency in writing that an emergency spillage (including flood water and firewater arisings) management plan has been prepared and instigated.	At least three calendar months before the start of commissioning.

Schedule 2 - Waste types, raw materials and fuels

Table S2.1 Raw materials and fuels	
Raw materials and fuel description	Specification

Table S2.2 Permitted waste types and quantities for waste imported for incineration	
Maximum quantity	850,000 tonnes per annum
Waste code	Description
02	WASTES FROM AGRICULTURE, HORTICULTURE, AQUACULTURE, FORESTRY, HUNTING AND FISHING, FOOD PREPARATION AND PROCESSING
02 01	wastes from agriculture, horticulture, aquaculture, forestry, hunting and fishing
02 01 03	plant-tissue waste
02 01 07	wastes from forestry
02 03	wastes from fruit, vegetables, cereals, edible oils, cocoa, coffee, tea and tobacco preparation and processing; conserve production; yeast and yeast extract production, molasses preparation and fermentation
02 03 04	materials unsuitable for consumption or processing
03	WASTES FROM WOOD PROCESSING AND THE PRODUCTION OF PANELS AND FURNITURE, PULP, PAPER AND CARDBOARD
03 01	wastes from wood processing and the production of panels and furniture
03 01 01	waste bark and cork
03 01 05	sawdust, shavings, cuttings, wood, particle board and veneer other than those mentioned in 03 01 04
03 03	wastes from pulp, paper and cardboard production and processing
03 03 01	waste bark and wood
03 03 07	mechanically separated rejects from pulping of waste paper and cardboard
03 03 08	wastes from sorting of paper and cardboard destined for recycling
03 03 10	fibre rejects, fibre-, filler- and coating-sludges from mechanical separation
15	WASTE PACKAGING; ABSORBENTS, WIPING CLOTHS, FILTER MATERIALS AND PROTECTIVE CLOTHING NOT OTHERWISE SPECIFIED
15 01	packaging (including separately collected municipal packaging waste)
15 01 01	paper and cardboard packaging
15 01 02	plastic packaging
15 01 03	wooden packaging
15 01 05	composite packaging
15 01 06	mixed packaging
15 01 09	textile packaging
15 02	absorbents, filter materials, wiping cloths and protective clothing
15 02 03	absorbents, filter materials, wiping cloths and protective clothing other than those mentioned in 15 02 02
17	CONSTRUCTION AND DEMOLITION WASTES (INCLUDING EXCAVATED SOIL FROM CONTAMINATED SITES)
17 02	wood, glass and plastic
17 02 01	wood

Table S2.2 Permitted waste types and quantities for waste imported for incineration	
Maximum quantity	850,000 tonnes per annum
Waste code	Description
19	WASTES FROM WASTE MANAGEMENT FACILITIES, OFF-SITE WASTE WATER TREATMENT PLANTS AND THE PREPARATION OF WATER INTENDED FOR HUMAN CONSUMPTION AND WATER FOR INDUSTRIAL USE
19 02	wastes from physico/chemical treatments of waste (including dechromatation, decyanidation, neutralisation)
19 02 03	premixed wastes composed only of non-hazardous wastes
19 02 10	combustible wastes other than those mentioned in 19 02 08 and 19 02 09
19 05	wastes from aerobic treatment of solid wastes
19 05 01	non-composted fraction of municipal and similar wastes
19 05 02	non-composted fraction of animal and vegetable waste
19 05 03	off-specification compost
19 06	wastes from anaerobic treatment of waste
19 06 04	digestate from anaerobic treatment of municipal waste
19 06 06	digestate from anaerobic treatment of animal and vegetable waste
19 12	wastes from the mechanical treatment of waste (for example sorting, crushing, compacting, pelletising) not otherwise specified
19 12 01	paper and cardboard
19 12 04	plastic and rubber
19 12 07	wood other than that mentioned in 19 12 06
19 12 08	textiles
19 12 10	combustible waste (refuse derived fuel)
19 12 12	other wastes (including mixtures of materials) from mechanical treatment of wastes other than those mentioned in 19 12 11

Schedule 3 – Emissions and monitoring

Table S3.1 Point source emissions to air – emission limits and monitoring requirements

Emission point ref. & location	Parameter	Limit	Reference period	Monitoring frequency	Monitoring standard or method
A1, A2, A3, A4 As shown in Schedule 7	Particulate matter	30 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Particulate matter	10 mg/m ³	daily average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Total Organic Carbon (TOC)	20 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Total Organic Carbon (TOC)	10 mg/m ³	Daily average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Hydrogen chloride	60 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Hydrogen chloride	10 mg/m ³	Daily average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Hydrogen fluoride	2 mg/m ³	1 hr average	Quarterly in the first year of operation; then bi-annual	BS ISO 15713
A1, A2, A3, A4 As shown in Schedule 7	Carbon monoxide	100 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Carbon monoxide	50 mg/m ³	Daily average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Sulphur dioxide	200 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Sulphur dioxide	50 mg/m ³	Daily average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Oxides of nitrogen (NO and NO ₂ expressed as NO ₂)	400 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Oxides of nitrogen (NO and NO ₂ expressed as NO ₂)	200 mg/m ³	Daily average	Continuous measurement	BS EN 15267-3

Table S3.1 Point source emissions to air – emission limits and monitoring requirements

Emission point ref. & location	Parameter	Limit	Reference period	Monitoring frequency	Monitoring standard or method
A1, A2, A3, A4 As shown in Schedule 7	Cadmium & thallium and their compounds (total)	0.05 mg/m ³	Average over minimum 30 minute, maximum 8 hour period	Quarterly in the first year of operation; then bi-annual	BS EN 14385
A1, A2, A3, A4 As shown in Schedule 7	Mercury and its compounds	0.05 mg/m ³	Average over minimum 30 minute, maximum 8 hour period	Quarterly in the first year of operation; then bi-annual	BS EN 13211
A1, A2, A3, A4 As shown in Schedule 7	Sb, As, Pb, Cr, Co, Cu, Mn, Ni and V and their compounds (total)	0.5 mg/m ³	Average over minimum 30 minute, maximum 8 hour period	Quarterly in the first year of operation; then bi-annual	BS EN 14385
A1, A2, A3, A4 As shown in Schedule 7	Dioxins / furans (I-TEQ)	0.1 ng/m ³	Average over minimum 6 hours, maximum 8 hour period	Quarterly in the first year of operation; then bi-annual	BS EN 1948
A1, A2, A3, A4 As shown in Schedule 7	Ammonia	None set	Daily average	Continuous	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	water vapour content	None set	--	Continuous	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Nitrous oxide (N ₂ O)	None set	Daily average	Continuous	BS EN 15267-3
A1, A2, A3, A4 As shown in Schedule 7	Dioxin-like PCBs (WHO-TEQ Humans / Mammals)	None set	Periodic: average value over sample period of between 6 and 8 hours.	Quarterly in the first year of operation; then bi-annual	BS EN/TS 1948-4
	Dioxin-like PCBs (WHO-TEQ Fish)				
	Dioxin-like PCBs (WHO-TEQ Birds)				
A1, A2, A3, A4 As shown in Schedule 7	Specific individual polycyclic aromatic hydrocarbons (PAHs), as specified in Schedule 6.	None set	Periodic: average value over sample period of between 6 and 8 hours.	Quarterly in the first year of operation; then bi-annual	Procedure shall use BS ISO 11338-1 and BS-ISO 11338-2.

Table S3.1 Point source emissions to air – emission limits and monitoring requirements

Emission point ref. & location	Parameter	Limit	Reference period	Monitoring frequency	Monitoring standard or method
A1, A2, A3, A4 As shown in Schedule 7	Dioxins / furans (WHO-TEQ Humans / Mammals)	None set	Periodic: average value over sample period of between 6 and 8 hours.	Quarterly in the first year of operation; then bi-annual	BS EN/TS 1948-4
	Dioxins / furans (WHO-TEQ Fish)				
	Dioxins / furans (WHO-TEQ Birds)				

Table S3.1(a) Point source emissions to air during abnormal operation of incineration plant – emission limits and monitoring requirements

Emission point ref. & location	Parameter	Limit (including unit)	Reference period	Monitoring frequency	Monitoring standard or method
A1, A2, A3, A4 As shown in Schedule 7	Particulate matter	150 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3 during abatement plant failure
A1, A2, A3, A4 As shown in Schedule 7	Total Organic Carbon (TOC)	20 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3 during abatement plant failure
A1, A2, A3, A4 As shown in Schedule 7	Carbon monoxide	100 mg/m ³	½-hr average	Continuous measurement	BS EN 15267-3 during abatement plant failure

Table S3.2 Point Source emissions to water (other than sewer) and land – emission limits and monitoring requirements

Emission point ref. & location	Parameter	Limit	Emission Target	Monitoring frequency	Monitoring standard or method
W1 As shown in Schedule 7	Total suspended solids (Note [1])	150 mg/l	100 mg/l	Weekly	BS EN 872
W1 As shown in Schedule 7	PH	4 – 11	5 – 9	Weekly	BS6068-2.50
W1 As shown in Schedule 7	Temperature	30 °C	24 °C	Weekly	--
W1 As shown in Schedule 7	Oil and grease	None visible	--	Weekly	--
W1 As shown in Schedule 7	Available chlorine	20 mg/l	5 mg/l	Weekly	Sampling and analysis to ISO 17025 by idiometric titrimetry

Note [1]: Emission limits and targets for suspended solids do not apply during or immediately after heavy rainfall or the testing of a fire water main.

Table S3.3 Noise monitoring requirements

Location or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
Noise survey at, or nearby, sensitive receptors and at representative locations on the site boundary	Noise	Once during commissioning and once within 6 months of plant commissioning	BS 4142:1997	Plant to be operating at a high a rate as practicable Survey to be carried out in accordance with the requirements of PO06.

Table S3.4 Process monitoring requirements

Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
At locations prior to the second pass boiler	Combustion chamber temperature (°C)	Continuous	Traceable to National Standards	--

Table S3.5 Residue quality

Emission point reference or source or description of point of measurement	Parameter	Limit	Monitoring frequency	Monitoring standard or method	Other specifications
Bottom Ash	LOI	<5%	Monthly in the first year of operation, then Quarterly	Sampling and analysis as per Environment Agency ash sampling protocol.	--
Bottom Ash	Metals (Antimony, Cadmium, Thallium, Mercury, Lead, Chromium, Copper, Manganese, Nickel, Arsenic, Cobalt, Vanadium, Zinc) and their compounds	--	Monthly in the first year of operation, then Quarterly	Sampling and analysis as per Environment Agency ash sampling protocol.	--
APC Residues	Dioxins/furans and Dioxin-like PCBs.				
Bottom Ash	Total soluble fraction and metals (Antimony, Cadmium, Thallium, Mercury, Lead, Chromium, Copper, Manganese, Nickel, Arsenic, Cobalt, Vanadium, Zinc) soluble fractions	--	Before use of a new disposal or recycling route	Sampling and analysis as per Environment Agency ash sampling protocol.	--

Schedule 4 - Reporting

Parameters, for which reports shall be made, in accordance with conditions of this permit, are listed below.

Table S4.1 Reporting of monitoring data			
Parameter	Emission or monitoring point/reference	Reporting period	Period begins
Emissions to air Parameters as required by condition 3.5.1.	A1, A2, A3, A4	Quarterly	1 January, 1 April, 1 July, 1 October
Emissions to water Parameters as required by condition 3.5.1	W1	Quarterly	1 January, 1 April, 1 July, 1 October
Noise monitoring Parameters as required by condition 3.5.1	Noise survey as specified in Table S3.3	Once only after 6 months	Commissioning completion date
Incinerator residues monitoring Parameters as required by condition 3.5.1	Incinerator ash collection system	Quarterly	1 January, 1 April, 1 July, 1 October
Functioning and monitoring of the incineration plant as required by condition 4.2.2	--	Every 12 months	1 January

Table S4.2: Annual production/treatment	
Parameter	Units
Total digestate incinerated (a)	tonnes
Total biomass incinerated (b)	tonnes
Total refuse derived fuel incinerated (c)	tonnes
Total Commercial and Industrial waste incinerated (d)	tonnes
Total waste incinerated (a + b + c +d)	tonnes
Electrical energy exported (e)	KWh
Electrical energy used on installation (f)	KWh
Steam (energy) exported from the installation (g)	KWh
Total electrical and heat energy generated (e + f +g)	KWh

Table S4.3 Performance parameters		
Parameter	Frequency of assessment	Units
Electrical energy Imported to site	Quarterly	KWh / tonne of waste incinerated
Fuel gas consumption	Quarterly	Kg / tonne of waste incinerated
Mass of Bottom Ash produced	Quarterly	Kg / tonne of waste incinerated
Mass of APC residues produced	Quarterly	Kg / tonne of waste incinerated
Mass of Other solid residues produced	Quarterly	Kg / tonne of waste incinerated
Ammonia consumption	Quarterly	Kg / tonne of waste incinerated
Activated Carbon consumption	Quarterly	Kg / tonne of waste incinerated
Lime consumption	Quarterly	Kg / tonne of waste incinerated
Water consumption	Quarterly	Kg / tonne of waste incinerated
Periods of WID abnormal operation	Quarterly	Number of occasions, duration and cumulative time for current calendar year, for each line

Table S4.4 Reporting forms

Media/parameter	Reporting format	Date of form
Air	Forms <i>Air 1 to Air 9 inclusive</i> or other forms as agreed in writing by the Environment Agency	Undated
Water	Form <i>Water 1</i> or other form as agreed in writing by the Environment Agency	Undated
Ash residues	Form <i>Residues 1</i> or other form as agreed in writing by the Environment Agency	Undated
Other performance indicators	Form <i>Performance 1</i> or other form as agreed in writing by the Environment Agency	Undated
Annual performance	Forms <i>Annual Performance 1</i> and <i>Annual Performance 2</i> or other forms as agreed in writing by the Environment Agency	Undated

Schedule 5 - Notification

These pages outline the information that the operator must provide.

Units of measurement used in information supplied under Part A and B requirements shall be appropriate to the circumstances of the emission. Where appropriate, a comparison should be made of actual emissions and authorised emission limits.

If any information is considered commercially confidential, it should be separated from non-confidential information, supplied on a separate sheet and accompanied by an application for commercial confidentiality under the provisions of the EP Regulations.

Part A

Permit Number	EPR/EP3731XL
Name of operator	INEOS Chlor Ltd
Location of Facility	Runcorn Energy from Waste Plant
Time and date of the detection	

(a) Notification requirements for any malfunction, breakdown or failure of equipment or techniques, accident, or fugitive emission which has caused, is causing or may cause significant pollution	
To be notified within 24 hours of detection	
Date and time of the event	
Reference or description of the location of the event	
Description of where any release into the environment took place	
Substances(s) potentially released	
Best estimate of the quantity or rate of release of substances	
Measures taken, or intended to be taken, to stop any emission	
Description of the failure or accident.	

(b) Notification requirements for the breach of a limit	
To be notified within 24 hours of detection unless otherwise specified below	
Emission point reference/ source	
Parameter(s)	
Limit	
Measured value and uncertainty	
Date and time of monitoring	
Measures taken, or intended to be taken, to stop the emission	

Time periods for notification following detection of a breach of a limit	
Parameter	Notification period

(c) Notification requirements for the detection of any significant adverse environmental effect	
To be notified within 24 hours of detection	
Description of where the effect on the environment was detected	
Substances(s) detected	
Concentrations of substances detected	
Date of monitoring/sampling	

Part B - to be submitted as soon as practicable

Any more accurate information on the matters for notification under Part A.	
Measures taken, or intended to be taken, to prevent a recurrence of the incident	
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	
The dates of any unauthorised emissions from the facility in the preceding 24 months.	

Name*	
Post	
Signature	
Date	

* authorised to sign on behalf of **INEOS Chlor Ltd**

Schedule 6 - Interpretation

“abatement equipment” means that equipment dedicated to the removal of polluting substances from releases from the installation to air or water media.

“APC residues” means air pollution control residues

“application” means the application for this permit, together with any additional information supplied by the operator as part of the application and any response to a notice served under Schedule 5 to the EP Regulations.

“authorised officer” means any person authorised by the Environment Agency under section 108(1) of The Environment Act 1995 to exercise, in accordance with the terms of any such authorisation, any power specified in section 108(4) of that Act.

“bi-annual” means twice per year with at least five months between tests;

“bottom ash” means ash transported by the grate

“CEM” Continuous emission monitor

“CEN” means Comité Européen de Normalisation

“daily average” for releases of substances to air means the average of valid half-hourly averages over a calendar day during normal operation.

“dioxin and furans” means polychlorinated dibenzo-p-dioxins and polychlorinated dibenzofurans.

“disposal” means any of the operations provided for in Annex IIA to Directive 2006/12/EC of the European Parliament and of the Council of 5 April 2006 on Waste.

“emissions of substances not controlled by emission limits” means emissions of substances to air, water or land from the activities, either from the emission points specified in schedule 3 or from other localised or diffuse sources, which are not controlled by an emission limit..

“EP Regulations” means The Environmental Permitting (England and Wales) Regulations SI 2010 No.675 and words and expressions used in this permit which are also used in the Regulations have the same meanings as in those Regulations.

“groundwater” means all water, which is below the surface of the ground in the saturation zone and in direct contact with the ground or subsoil.

“incineration line” means all of the incineration equipment related to a common discharge to air location.

“ISO” means International Standards Organisation.

“LOI” means loss on ignition a technique used to determine the combustible material by heating the ash residue to a high temperature.

“MCERTS” means the Environment Agency’s Monitoring Certification Scheme.

“PAH” means Poly-cyclic aromatic hydrocarbon, and comprises Anthanthrene, Benzo[a]anthracene, Benzo[b]fluoranthene, Benzo[k]fluoranthene, Benzo[b]naph(2,1-d)thiophene, Benzo[c]phenanthrene, Benzo[ghi]perylene, Benzo[a]pyrene, Cholanthrene, Chrysene, Cyclopenta[c,d]pyrene, Dibenz[ah]anthracene, Dibenz[a,i]pyrene Fluoranthene, Indo[1,2,3-cd]pyrene, Naphthalene

“PCB” means Polychlorinated Biphenyl. Dioxin-like PCBs are the non-ortho and mono-ortho PCBs listed in the table below

“quarter” means a calendar year quarter commencing on 1 January, 1 April, 1 July or 1 October.

“quarterly” for reporting/sampling means after/during each 3 month period, January to March; April to June; July to September and October to December and, when sampling, with at least 2 months between each sampling date.

“recovery” means any of the operations provided for in Annex IIB to Directive 2006/12/EC of the European Parliament and of the Council of 5 April 2006 on Waste.

“shut down” is any period where the plant is being returned to a non-operational state and there is no waste being burned.

“start up” is any period, where the plant has been non-operational, after igniting the auxiliary burner until waste fuel has been fed to the plant to initiate steady-state conditions as agreed in writing with the Environment Agency.

“TOC” means *Total Organic Carbon*. In respect of releases to air, this means the gaseous and vaporous organic substances, expressed as TOC. In respect of Bottom Ash, this means the total carbon content of all organic species present in the ash (excluding carbon in elemental form).

“Waste code” means the six digit code referable to a type of waste in accordance with the List of Wastes (England) Regulations 2005, or List of Wastes (Wales) Regulations 2005, as appropriate, and in relation to hazardous waste, includes the asterisk.

“WFD” means Waste Framework Directive (Directive 2006/12/EC of the European Parliament and of the Council of 5 April 2006 on Waste).

“Waste Incineration Directive” means Directive 2000/76/EC on the incineration of waste (O.J. L 332, 28.12.2000)

“WID abnormal operation” means any technically unavoidable stoppages, disturbances, or failures of the abatement plant or the measurement devices other than continuous emission monitors for releases to air of particulates, TOC and/or CO, during which the concentrations in the discharges into air and the purified waste water of the regulated substances may exceed the normal emission limit values.

“year” means calendar year ending 31 December.

Where a minimum limit is set for any emission parameter, for example pH, reference to exceeding the limit shall mean that the parameter shall not be less than that limit.

Unless otherwise stated, any references in this permit to concentrations of substances in emissions into air means:

- (a) in relation to emissions from combustion processes, the concentration in dry air at a temperature of 273K, at a pressure of 101.3 kPa and with an oxygen content of 3% dry for liquid and gaseous fuels, 6% dry for solid fuels; and/or
- (b) in relation to emissions from non-combustion sources, the concentration at a temperature of 273K and at a pressure of 101.3 kPa, with no correction for water vapour content; and/or
- (c) in relation to gases from incineration plants other than those burning waste oil, the concentration in dry air at a temperature of 273K, at a pressure of 101.3 kPa and with an oxygen content of 11% dry.

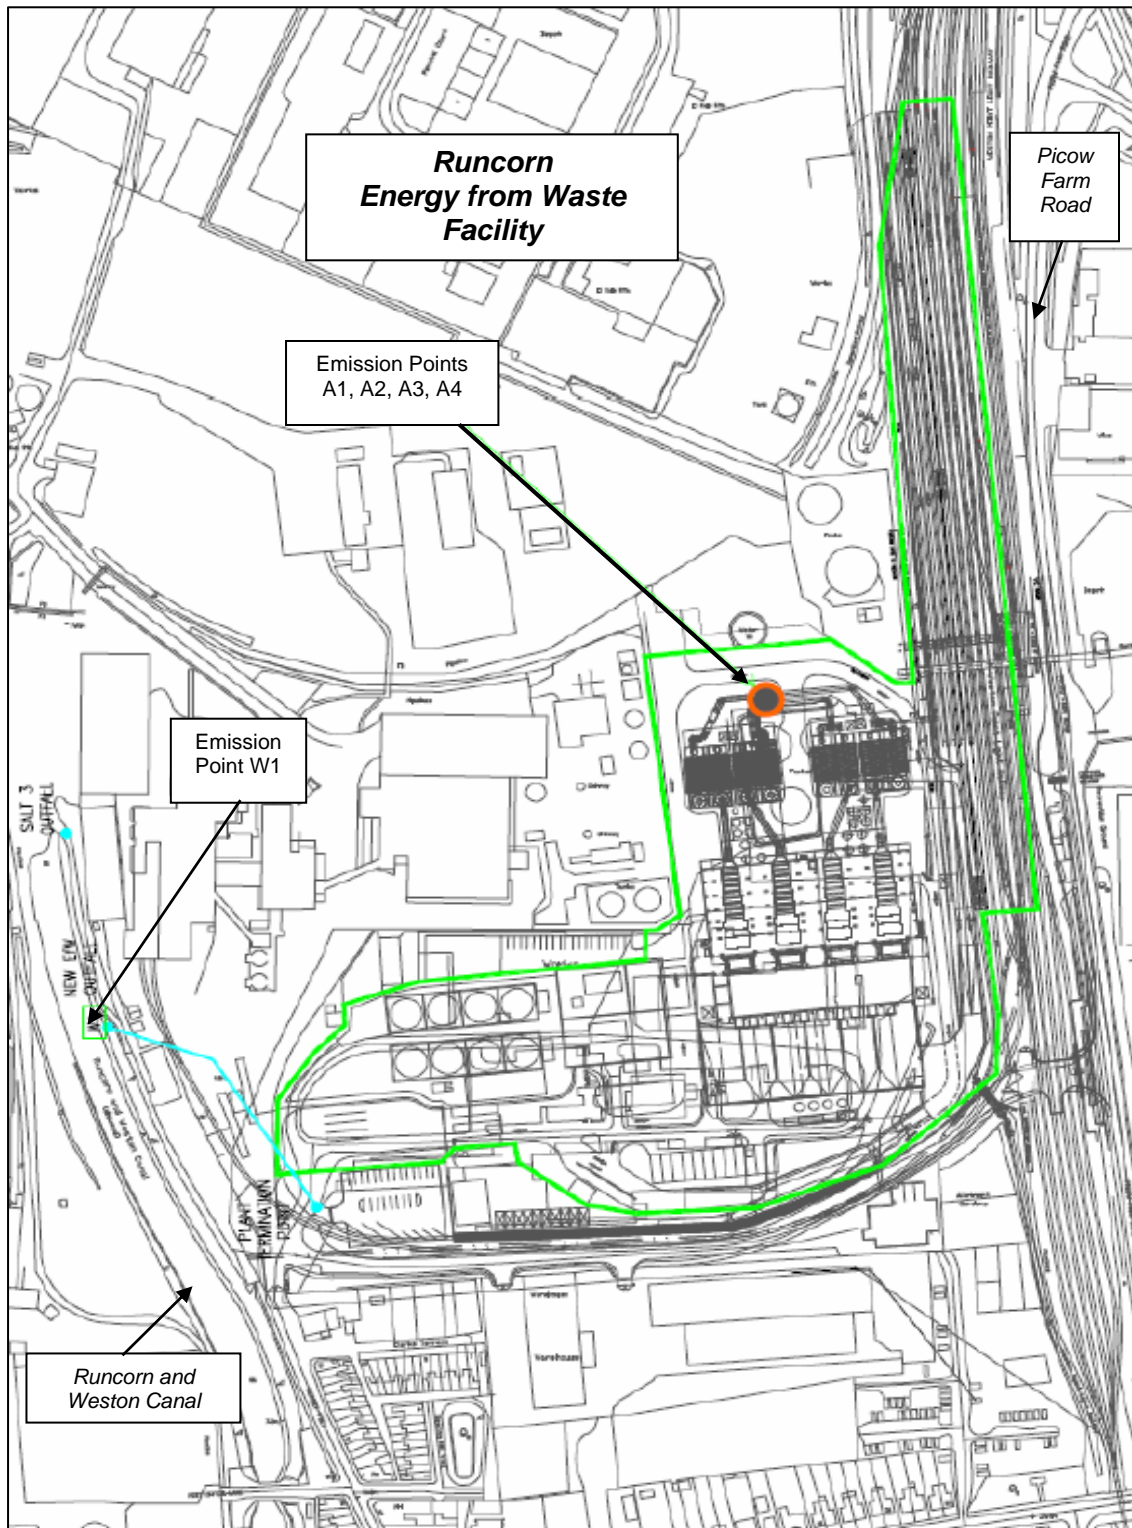

For dioxins/furans and dioxin-like PCBs the determination of the toxic equivalence concentration (I-TEQ, & WHO-TEQ for dioxins/furans, WHO-TEQ for dioxin-like PCBs) stated as a release limit and/ or reporting requirement, the mass concentrations of the following congeners have to be multiplied with their respective toxic equivalence factors before summing. When reporting on measurements of dioxins/furans and dioxin-like PCBs, the toxic equivalence concentrations should be reported as a range based on: all congeners less than the detection limit assumed to be zero as a minimum, and all congeners less than the detection limit assumed to be at the detection limit as a maximum.
