

# DON'T LEAVE IT TO THE BIRDS TO TELL US!

We are interested to hear your comments, ideas or opinions. Please take part in making a better Wales and answer the questions below then send them back to us.

Do you support our goals for 2025 and for 2050? Are they too ambitious or not enough?

We should all ~~try~~ try to have zero waste by 2020 as it will probably be too late if we wait for 2050. (the polar ice sheets will have melted)  
Do you think our plans under 'How' we are going to meet our targets are realistic, detailed enough or have we missed anything?

No the plans are not realistic. You need to give people a real incentive to go zero like a waste tax where people have to pay for what they throw away. As well as the current plans.

Are our plans for business, communities & households and the public sector enough?

The public sector ~~is a~~ plan is good but with ~~business~~ business and households you still need a big incentive.

What would you like to see happen to make Wales "Zero Waste"?

I would like to see laws passed on packaging and materials used to make things and designs to make things easier to recycle and a law saying you have to recycle what you can. Also somehow we have to cut our footprint by 66% not just 15.

Why do you not mention incineration are you trying to hide it from us. It mentions it on the full document. Well whether you mention it or not burning stuff is NOT the answer. We are trying to save the planet not destroy it with toxic fumes.
